Dominique Breffort, Andre Jouineau : German Jets of World War II (Planes and Pilots) before purchasing it in order to gauge whether or not it would be worth my time, and all praised German Jets of World War II (Planes and Pilots):

2 of 2 people found the following review helpful. nicely illustrated book on WW2 German Jets By Blaine This is a heavily illustrated (side views) volume on German jets (and rockets) of WW2. Most of the books in this series focus on one aircraft, but this one covers the ME262, ME163, Arado Blitz, and the Heinkel Salamander with a few pages of history and historical photos in black and white, and then a nice amount of illustrated side views. I buy all the books in this series. 10 of 11 people found the following review helpful. Jets, jets and only jets. By Steve Muth It is another book on the German jets of World War Two. It is Ok but does not give anything new. It is readable and has good illustrations but it basically a rehash of what is out there. It would have been better with a few more of the German jets that flew before the war ended; like the He 162, He 280, Ba 349, Ju 287, Go 229, Me 328 and Fi 103R-4.0 of 0 people found the following review helpful. Five Stars By Customer outstanding

Germany was not only the first country to get a jet aircraft to fly but above all it was the only country fighting in World War Two to mass produce and above all engage several types of aircraft using this new kind of power plant in the fighting, thus opening the way for air warfare as we know it nowadays. This new volume in the collection "Planes and Pilots", which wittingly ignores the myriad of jet aircraft projects which the Germans thought up all during the

war most of which never got beyond the drawing board, only deals with the machines which were built in enough numbers to be used operationally. The Messerschmitt Me 163 rocket-fighter, more dangerous for its pilots than for its opponents; the twin-engined Arado 234, better at reconnaissance than at bombing which was its intended role; the Heinkel He 162, the People's Fighter, built in record time but arriving too late to prove the effectiveness of its design; and above all the Messerschmitt Me 262 - the real star among the German fighters during the last year of the war and whose tally of kills gives a glimpse of the real impact on the course of the war it might have had, had its development not been so considerably delayed by innumerable technical problems and, for a while, by crass strategic errors.
