Craig N. Huegel : Native Wildflowers and Other Ground Covers for Florida Landscapes before purchasing it in order to gage whether or not it would be worth my time, and all praised Native Wildflowers and Other Ground Covers for Florida Landscapes:

have enjoyed taking a walk in a local park that has a natural hiking area. Additionally, we enjoy hikes throughout much of the state forest and other off the trail type places. One thing that has always rather annoyed me was my near total ignorance about many of the wildflowers I've encountered on those walks - you can only get away with calling just so many yellow flowers a "daisy". Others are quite lovely and still others look a lot like they might be related to domesticated flowers (wild orchid looks plants for example)...unfortunately, I don't know a thing about native Florida wildflowers - until now! This book is packed full of color photographs depicting oodles of flowers that I encounter on a regular basis. There is a short description and additional information...a bit more than a field guide but not exactly comprehensive. Still, very accessible. Wonderful book. Well worth the wait (I pre-ordered this and waited for the new release). 0 of 0 people found the following review helpful. Do it for the bees and butterflies! By PlantLover619 This is my go-to book when I want to plant something in the yard. I'm trying to become a haven for any pollinators near our yard. Craig Huegel introduced me to quite a few new flowers in this book. The flowers I have planted from reading this book have added much value for our birds and pollinators that visit our yard. They seem to really like Firebush which also attracts migrating birds when it fruits. 1 of 1 people found the following review helpful. Outstanding book -- again! We're in the process of transforming our yard to native and Florida-friendly plants and his books (including Gardening for Wildlife published last year) have been so important!

This is an extremely helpful and refreshing addition to the resources for people interested in these plants, whether they wish to grow them or not." --Daniel Austin, University of Arizona Florida gardens and lawns are full of flowering plants and turfgrass, most commonly exotic species.
